

ANH HA

Application Developer | Enterprise Applications, Databases & POS Systems

Eugene, OR | (541) 286-2005 | quanganh.ht97@gmail.com | quanganhha1997.github.io/tranquha-portfolio/

PROFESSIONAL SUMMARY

Application Developer with full-lifecycle experience — analysis, coding, testing, documentation, and support — across POS, online ordering, security, and database-driven systems in a fast-paced, customer-facing retail environment. Skilled in Java, Python, JavaScript, SQL, and relational database design and modeling, with hands-on work building secure, data-intensive applications and independently troubleshooting software, hardware, and operational systems. Strong CS fundamentals in object-oriented programming, data structures, and asynchronous application design, with a track record of learning new languages and platforms quickly.

TECHNICAL SKILLS

Databases & Data: PostgreSQL, relational database design & modeling, ER modeling, SQL analysis, data-intensive application design, data pipelines, ChromaDB

Languages & CS Foundations: Java, Python, JavaScript, C++, SQL, HTML/CSS, data structures & algorithms, object-oriented programming

Application Development: React, Node.js, FastAPI, REST APIs, asynchronous/API architectures, secure application design, access control

Enterprise & Retail Systems: POS systems, online ordering systems, security systems, servers, workstations, printers, requirements analysis, systems troubleshooting, documentation, user & vendor support

Cloud & Tools: Google Cloud, Cloud Run, Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

IT Coordinator & Developer | **Lemongrass** | *Corvallis, OR* | *Oct 2022 – Dec 2024*

- Support and maintain business-critical restaurant technology systems — POS, online ordering, security, workstations, printers, and related operational software — coordinating hardware/vendor support and documenting issues from analysis through resolution.
- Analyze staff and business workflow needs, troubleshoot system issues, and recommend software and hardware improvements that boost reliability and daily operational efficiency.
- Design, build, and maintain the restaurant's website (HTML, CSS, JavaScript, React) applying UX principles to improve the digital customer experience and operational visibility.
- Own full lifecycle development work — gathering requirements, implementing updates, testing functionality, documenting changes, and supporting users post-deployment.

IS Desktop Solutions Tech I | **Samaritan Health Services** | *Corvallis, OR* | *Jan 2023 – Sep 2023*

- Installed, configured, and supported Windows workstations, laptops, printers, peripherals, and software.
- Troubleshot hardware and software issues in clinical and business environments, documented solutions, prioritized requests, and escalated complex problems.

Undergraduate Teaching Assistant | **Oregon State University** | *Corvallis, OR* | *Jan 2022 – Jun 2022*

- Led discussion sections for 50+ computer science students on algorithms, data structures, and Python; reviewed assignments, supported debugging, and delivered live coding demos reinforcing software engineering fundamentals.

SELECTED PROJECTS

- **Cinema DBMS (PostgreSQL, SQL, ER Modeling):** Designed a relational movie database with full ER modeling and SQL analysis — schema design and querying skills directly relevant to enterprise, data-intensive applications.
- **TriMet Analytics (Google Cloud, Data Pipelines):** Built a cloud-based data pipeline to process large-scale public transit data, strengthening data engineering, cloud deployment, and operational analytics skills.
- **Privacy Tracker (Web Application, Access Control):** Built a health-tracking web application using Attribute-Based Access Control, focused on secure application logic and user data privacy.
- **PSU AI Assistant (FastAPI, LangChain, Gemini, ChromaDB):** Developed a retrieval-augmented chatbot using asynchronous API services and vector storage to answer user questions from structured knowledge sources.

EDUCATION

Portland State University | M.S., Computer Science | Portland, OR | Jun 2026

Coursework/project focus: AI systems, cloud & data pipelines, secure web applications, data-driven application development.

Oregon State University | B.S., Computer Science and Psychology | Corvallis, OR | Jun 2022

Relevant coursework: Software Engineering, Cloud Application Development, Mobile Software Development, Usability Engineering, Visual Analytics, Inclusive Design.
